Functional Programming with Scala
Project Title: JSON Data processing

Group Name: 8

Bontemps, Marvin

IG5_Polytech

November 19, 2024

About the Project

- **Your Specific Contribution:**
  - Write a scala script to process two NIST JSON data files in MongoDB Atlas.
  - Connect to MongoDB Atlas using MongoDB drivers.

- **Methodology or Approach:**
  - Use the technics learned in the previous TP sessions.
  - Add the new dependencies and drivers in the existing project.

Challenges and Learning

- **Challenges Faced and Their Resolutions:**
  - Integrate the new files to the existing project.
  - Read the JSON file on the app.
  - Change the versions used to provide compatibility

- **Learning Gained:**
  - Better comprehension of Scala.
  - Developed my knowledge in debugging.

- **Future Improvements:**
  - Add the Node4j step in the project.
